

HS-S045 HEPA Wall Filter

Description

For stabile placement at a wall the unit consists of a durable frame, which is made of gas-tightly welded aluminum sections. The outer angle sections form a surrounding mounting frame with a broad contact surface for easy and tight installation onto the wall.

This wall filter also features aluminum supporting angles as well as a spindle-type tightening device made out of chromium-plated parts, which guarantee exact fit and leak-proofness between filter cells and the frames' contact area. The filter will be delivered ready-to-use.

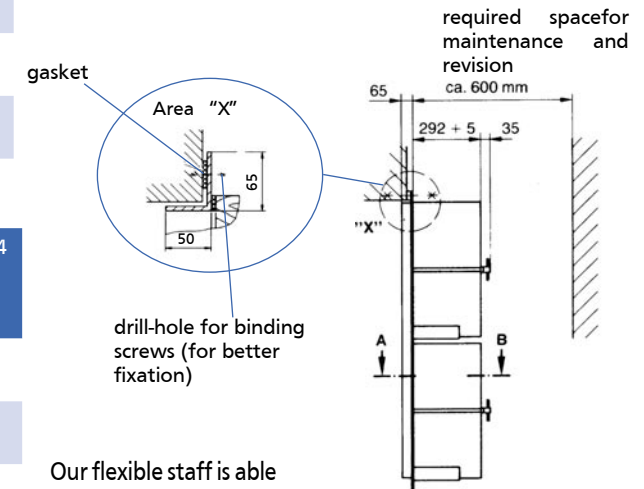

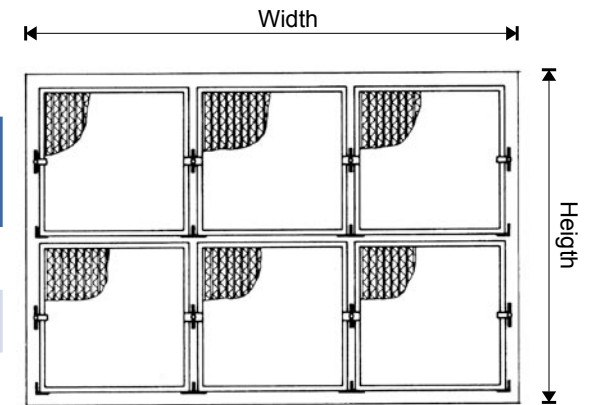

for filter cells **610x610x292 mm**
610x610x150 mm
610x610x 78 mm
